We first analyze these strategies using the Work Transformation Matrix, a design iteration model which shows that one of the strategies is expected to display a faster solution time. We then demonstrate experimentally the difference in development time by observing eight design teams working on the problem using the two strategies. We found that the decoupling strategy suggested by the model reduced solution time while maintaining quality of the technical solutions. 1. Introduction Design performance is an important factor in determining the success of a manufacturing firm. The amount of time that it takes the firm to develop a product is an important factor in determining the success of the design [Clark and Fujimoto 1991]. Our study of the design process has led to the development of formal mathematical models of the design process which can estimate the amount of time that it takes to design a technical product [Eppinger et...
