Excerpt from Probabilistic Estimates of Design Load Factors for Wind-Sensitive Structures Using the Peaks Over Threshold Approach Analysis of the data was performed via programs that implement the de Haan version of the peaks over threshold method for estimating extreme value distribution parameters.2 A discussion of this method may be found in From the estimated distribution parameters, we obtained estimates of wind speeds having specified mean recurrence intervals R. (the recurrence interval R in years is the inverse of the probability that that wind speed will be exceeded in any one year.) Under the assumption that a reverse Weibull distribution is valid.
