Version 2 Goddard Satellite-Based Surface Turbulent Fluxes

By Shu-Hsien Chou

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 44 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. Information on the turbulent fluxes of momentum, moisture, and heat at the air-sea interface is essential in improving model simulations of climate variations and in climate studies. We have derived a 13.5-year (July 1987-December 2000) dataset of daily surface turbulent fluxes over global oceans from the Special Sensor Microwave Imager (SSMI) radiance measurements. This dataset, version 2 Goddard Satellite-based Surface Turbulent Fluxes (GSSTF2), has a spatial resolution of 1 degree x 1 degree latitude-longitude and a temporal resolution of 1 day. Turbulent fluxes are derived from the SSMI surface winds and surface air humidity, as well as the 2-m air and sea surface temperatures (SST) of the NCEPNCAR reanalysis, using a bulk aerodynamic algorithm based on the surface layer similarity theory. This item ships from La Vergne, TN. Paperback.
